

HL7 Analyzer

Features – HL7 Conformance Checking

HL7 Analyzer's conformance checking saves you time and reduces message processing errors. Get reliable validation of your HL7 messages against the HL7 standard.

HL7 messaging standards are flexible, but can also be complex. Manually checking messages for compliance can take days, be tedious, and is prone to errors.

HL7 Analyzer is designed with a powerful conformance checking feature that gives you quick validation of your HL7 messages against the HL7 standard for complete accuracy.

Initiating a conformance check enables you to debug error prone messages—detecting any problems before you go live. Analysts can create sample messages for testing application vendor-developed interfaces to ensure conformance.

Once the HL7 messages are checked for conformance, HL7 Analyzer issues a comprehensive error report outlining differences between the message data and the expected message structure. HL7 Analyzer even provides a reason for nonconformance.

HL7 Analyzer conformance checking helps save you time and reduces message processing errors.

About Corepoint Health

Corepoint Health solutions deliver interoperability for healthcare organizations and simplify the complexities of healthcare data through practical software applications, consulting and training. Our innovative and proven software solutions leverage clinical data flow efficiently for a diverse group of healthcare entities including hospitals, imaging centers, laboratories, clinics and healthcare vendors. This next generation approach to healthcare data and streamlined workflow is where Corepoint Health specializes in helping customers discover the power of integration.
